Custom Control Packages

Fully Automated Solutions

Our fully computerized solutions can start/stop grain pump, grain leg, conveyor and blower systems.

We can control electric gates and valves, distributors, cross conveyors, and unload augers.

Electronic scales can be integrated with our systems to provide you with on-screen readouts and automatic truck filling.

Once our systems are implemented, they can be easily modified or changed as your needs change.

Our touchscreen interfaces simplify running your grain system and are ideal for reducing errors if you have multiple users

Manual Control Packages

We build and install indoor and outdoor manual control panels customized to your handling system.

Manual panels can be as simple as an on/off switch box or as complex as a programmable relay solution that automatically monitors your system after manual start-up. It can include such options as ammeters and variable speed drives

Custom Contactor Panels

Built to your specifications, fully inspected, and able to handle a wide variety of motor sizes and power needs.
